

## Volute casing pump for dry-well installation DN 50-700

50 Hz / 60 Hz (DIN, IEC Motor)

Sewatec

Sewabloc

Automation products available:

- PumpExpert

## Application

For handling untreated sewage and all types of waste water in sewage treatment and industry.

## Operating Data

		Impeller Types				
		K	D	F	E	
Capacity	Q up to	10 000 2775	1260 350	680 189	2520 700	m <sup>3</sup> /h l/s
Head	H up to	95	40	40	50	m
Operating pressure	p up to	10	10	10	10	bar
Product temperature	t up to	70	70	70	70	°C

## Design

Horizontally or vertically mounted volute casing pump, also available in close-coupled design with flange-mounted standardized motor type B5/V1 (Sewabloc), with free-flow (F), single-vane (E), multi-vane (K) or open, diagonal single-vane (D) impeller.

## Bearings

Pump and motor sides are fitted with grease-packed rolling element bearings sealed for life.

From bearing bracket S05 onwards supplied with re-greasable bearing.

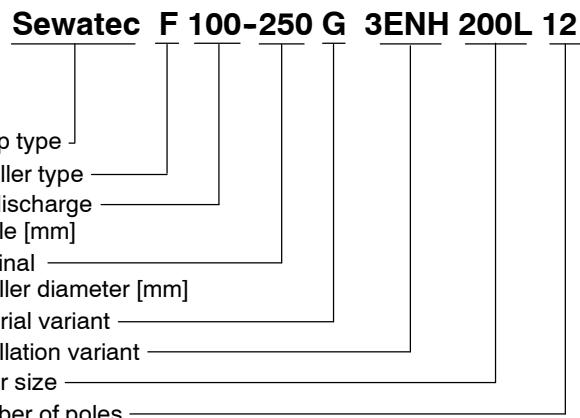

## Shaft Seal

All pump sizes are fitted with two mechanical seals in series, independent of the direction of rotation. A liquid containing chamber between the seals provides seal cooling and lubrication. Packed gland can be supplied as an alternative from bearing bracket S05 onwards.

## Materials

Pump casing:	Cast iron (JL 1040)
Wear plate:	Cast iron (JL 1040) / Duplex Steel / Wear resistant White Iron
Impeller:	Cast iron (JL 1040) / Duplex Steel / Wear resistant White Iron
Shaft:	Stainless steel 420 / F51
Casing wear ring:	Cast iron / VG 434
Mechanical seal:	SiC / SiC

--	--	--	---

Hydraulic systems with D-, F- and E-impellers are available only as shown in the documented QH parameters.

K-impellers can be adjusted to the required duty point.

## Guide to Selection of Materials and Hydraulic Systems, Depending on Pumped Medium

The table below is a guide, based on KSB's experience over many years, but the details given cannot be taken as a general recommendation. More detailed advice is available from KSB direct.

Make use of the KSB materials laboratories when selecting the most suitable material.

Pumped media <sup>1)</sup>	Recommended material	Recommended type of impeller <sup>2)</sup>	Notes and other recommendations
<b>Waste water</b>		K, D, E, F	
<b>River water</b>		K, D, E, F	
<b>Storm water</b>		K, D, E, F	Free impeller passage > solid substances. If necessary, pre-clean by screening
<b>Sewage</b>		F, D, E, (K) F	ATV recommend 100 mm free impeller passage, but at least 75 mm Two-channel impeller can be used in certain circumstances For highly gaseous media, contact KSB.
<b>Sludges</b>		F, E, D, K F, E, D K	Slurry to contain not more than 6 % dry solids
<b>Industrial effluent, containing:</b>		K F, E F, D K, F K, F	Free from solvents. Observe operator's instructions! Free from solvents. Contact KSB for silicone-free variant G2 or GH variant, special mechanical seal G2 or GH variant, special mechanical seal
<b>Industrial effluents, slightly acidic</b>		K, F	pH-value ≥ 6.5 G1 variant and FPM (Viton) O-rings
<b>Effluents, non-corrosive</b>		K K K K K K	
<b>Effluents, non corrosive, containing:</b>		K K K	FPM (Viton) O-rings FPM (Viton) O-rings } 4)
<b>Highly abrasive industrial effluent (chemically neutral), causing wear, e. g.</b>	<b>Wear resistant White Iron</b>	K K K, F K	The required materials largely depend on duration of operation, rotational speed and flow velocity For sinter content <4g/l GH variant & special mech. seals Up to 15 % milk of lime GH variant & special mech. seals Material selection based on medium analysis, GH variant, special mech. seals Material selection requires medium analysis, GH variant, special mech. seals
<b>Water and sand mixtures</b>		K, F	Up to 5 g/l solids, GH version, special mechanical seals.
<b>Waste water and land fill seepage water</b>	<b>Duplex Steel</b>	K, F	GC variant (not for seawater and brackish water)

1) Contact KSB for pumped media not listed here.

2) The type mentioned first is to be preferred.

3) High hydro-abrasive wear occurs from ~ 0.5 g/l solid admixtures at a circumferential velocity of >20 m/s or when under partial load.

4) Different specific weights and low solubility of the hydrocarbons mentioned may cause high concentrations. In such cases contact KSB.

## Materials - Information

**Cast Iron**  
**JL 1040 (GG-25)**  
Lamellar Graphite Cast Iron

This graphited cast iron to DIN 1691 is mostly used in the pumping of municipal sewage, sludges and rain- or surface water. Suitable for neutral, slightly aggressive media and media unlikely to cause excessive wear. The pH value of the pumped medium should be  $\geq 6.5$ , sand content  $\leq 0.5 \text{ g/l}$ .

**Duplex Steel**  
Cast Stainless Steel  
(1.4517 or a technically equivalent material)

The resistance to pitting of this ferritic-austenitic stainless cast steel makes it particularly suitable to pump sewage containing substantial amounts of chlorides and acids or sea- and brackish water. Its good chemical resistance, even against sewage containing phosphorus and sulphuric acid, has ensured its wide application in the chemical and process industries. Pumps made from duplex steel have been used very successfully to pump brine, chemical effluents (pH 1 - 12), foul water and seepage from waste disposal sites.

**Wear resistant White Iron**  
(JN3 029 or a technically equivalent material)

A wear resistant white iron for highly abrasive media, such as liquids containing sand, ashes or scale. Its hardness is approximately 61.5 to 68 Rockwell and therefore higher than hardened chromium steel. The alloyed cast iron of chromium-molybdenum has a significantly higher resistance to wear than cast iron JL 1040 (GG-25) or other cast materials.

Selection for a product density of 1.0 kg/dm<sup>3</sup> – higher density upon request.

For higher densities up to 1.2 kg/dm<sup>3</sup> (max.): Take into account the density of the fluid pumped when selecting the impeller diameter / bearing bracket combination.

**Speed / Impeller diameter / Bearing bracket combinations (density 1.0 kg/dm<sup>3</sup>)**

Selection for a product density of 1.0 kg/dm<sup>3</sup> - higher density upon request.

For higher densities up to 1.2 kg/dm<sup>3</sup> (max.): Take into account the density of the fluid pumped when selecting the impeller diameter / bearing bracket combination.

**Speed / Impeller diameter / Bearing bracket combinations (density 1.2 kg/dm<sup>3</sup>)**

Baugröße Pump Size	Lagerträger Bearing bracket		K-Rad / K-impeller								E-Rad / E-impeller

**Installation Types (Selection)**
**Sewatec - Fig. 0**

Pump with free drive shaft end

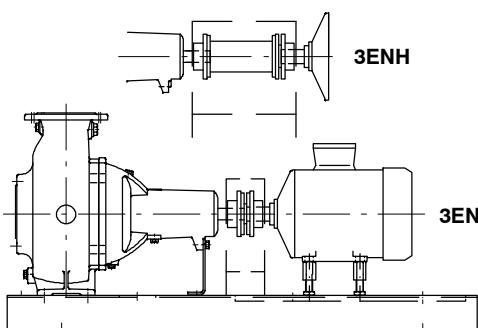

**Sewabloc**

Pump unit with flange-mounted motor, design B5/V1

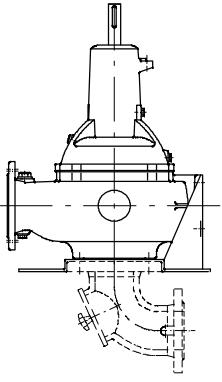

**Sewatec - 3H**
**3HZ**

Pump unit with baseplate, belt drive, belt guard and motor, design B5/V1, **(up to motor size 200 L)**
**Sewatec - 3H**
**3HM**

Pump unit with baseplate, belt drive, belt guard, motor support **(from motor size 225 S)** and motor, design B3 and motor height adjustment

**Sewatec - 3H with indirect drive**
**3HVG**

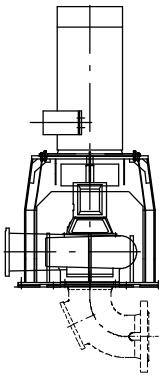

Pump unit with baseplate, coupling (also available with spacer), coupling guard, indirect drive pedestal, indirect drive, motor support, motor, design B3 and motor height adjustment facility, belt drive and belt guard.

**Sewatec - 3E**
**3EN - 3ENH**

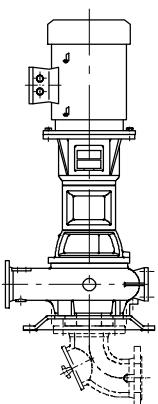

Pump unit with direct coupled motor of B3 design, baseplate, coupling (also available with spacer) coupling guard and motor height adjustment

Sewatec - vertical	V
	

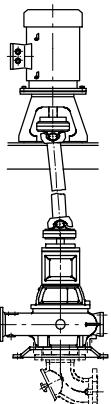

Vertical mounting of pump with free drive shaft end, with soleplate and suction elbow, for drive through cardan shaft,  
**(for bearing bracket S01, S02, S03)**

Sewatec - vertical	VUP
	

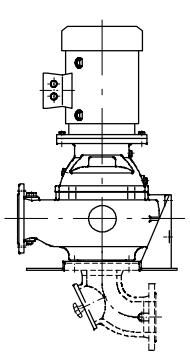

Pump unit with direct coupled motor, design B5/V1, vertical installation, motor stool for motor, coupling and coupling guard, suction elbow **(for drive ratings > 300 kW)**

Sewatec - vertical	VU
	

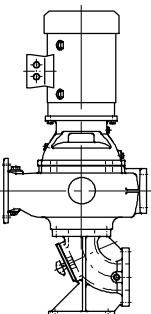

Pump unit with direct coupled motor, design B5/V1, vertical installation, soleplate for pump, drive lantern, coupling, coupling guard and suction elbow, for underfloor installation,  
**(from bearing bracket S05 onwards)**

Sewatec - vertical	VGW
	

Vertical mounting of pump with free drive shaft end, with soleplate for motor and pump, support frame, motor lantern and suction elbow, for drive through cardan shaft, **(from bearing bracket S05 onwards)**

Sewabloc - vertical	V
	

Pump unit with flange-mounted motor of B5/V1 design, placed vertically onto soleplate, with suction elbow for underfloor installation

Sewabloc - vertical	VF
	

Pump unit with flange-mounted motor of B5/V1 design, vertical installation, with druckfoot bend

## Rotational Speeds for Sewatec 3H

Standard electric motors - design B5/V1 up to 200 L, and design B3 from 225 S on - are used.

Motor speed $n_M$ [1/min]	Pump speed [1/min]	Transmission ratio [ i ]											
		1.0	1.06	1.12	1.2	1.25	1.34	1.4	1.5	1.6	1.7	1.8	1.9
960	--	--	--	--	--	--	685	640	600	565	535	505	480
1450	1450	1540	1620	1740	1810	1940	2030	2180	2320	2470	2610	2760	2900
	1450	1370	1295	1210	1160	1080	1035	965	905	850	805	765	725
2900	2900	2735	2590	2415	2320	2165	2070	1935	1815	1705	1610	1525	1450

### Notes:

- The permissible maximum speed is shown in the speed range curves.
- E- and F-impellers cannot be trimmed. Several sizes of F-impellers are available for each nominal diameter.
- Whilst K-impeller may be trimmed, reasons of efficiency recommend that the duty point is reached with the maximum impeller diameter, using the transmission ratios shown above.
- The maximum transmission ratio is 2 : 1.
- 4-pole motors are given preference to 2-pole motors because of their low noise level.
- 4-pole motors are frequently less expensive than motors with a higher number of poles and should therefore be given preference.
- Flywheels, incorporating the pulley, can be fitted within the limits of certain shaft distances and flywheel diameters

## Motor Rating

Electric motors of B3 or B5/V1 design are fitted as standard.

Motor sizes		100 L	112 M	132 S	132 M	160 M	160 L	180 M	180 L	200 L	225 S	225 M	250 M	280 S	280 M
Motor rating <sup>1)</sup> to IEC IP 55 [kW]	2 pol. 2900 min <sup>-1</sup>	3	4	5.5 7.5	--	11 15	18.5	22	--	30 37	--	45	55	75	90
	4 pol. 1450 min <sup>-1</sup>	2.2 3	4	5.5	7.5	11	15	18.5	22	30	37	45	55	75	90
	6 pol. 960 min <sup>-1</sup>	1.5	2.2	3	4 5.5	7.5	11	--	15	18.5 22	--	30	37	45	55
	8 pol. 750 min <sup>-1</sup>	0.75 1.1	1.5	2.2	3	4 5.5	7.5	--	11	15	18.5	22	30	37	45

Motor sizes		315 S	315 M	315 L	315	355	400
Motor rating <sup>1)</sup> to IEC IP 55 [kW]	2 pole 2900 min <sup>-1</sup>	110	132	160 200	250 315	355 400 500	560 630 710
	4 pole 1450 min <sup>-1</sup>	110	132	160 200	250 315	355 400 500	560 630 710
	6 pole 960 min <sup>-1</sup>	75	90	110 132 160	200 250	315 400	450 500 560
	8 pole 750 min <sup>-1</sup>	55	75	90 110 132	160 200	250 315	355 400 450

<sup>1)</sup> Deviations in power ratings are possible for the individual motor sizes depending on manufacturer.

## Power Reserve

Power input of pump [kW]	Recommended power reserve of drive motor
up to 7.5	30 % approx., 1 kW minimum
above 7.5 to 22	20 % approx.
above 22 to 55	15 % approx.
above 55	10 % approx.

## Guarantee, Tests / Inspections and Quality Assurance

Each pump is subjected to a functional test to KSB standard ZN 56 535. Pump performance is guaranteed to ISO 9906/A. Acceptance inspections conforming to ISO / DIN or another comparable standard are possible at a surcharge. The quality is assured under a tested and certified quality assurance system to DIN EN ISO 9001.

## Scope of Supply

**Sewatec:** Pump with bare shaft end

**Sewabloc:** Pump without flange mounted motor

Wear plate

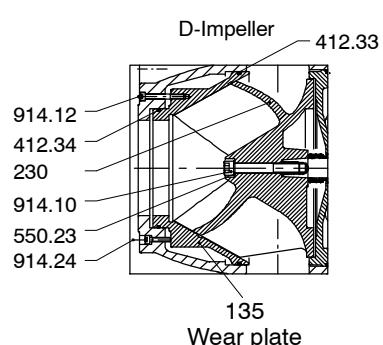

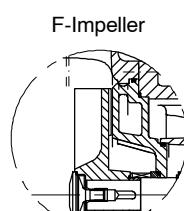

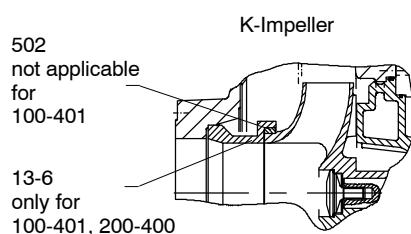

Part No.	Description	Part No.	Description	Part No.	Description
101	Pump casing	330	Bearing bracket	902	Stud
163	Discharge cover	411	Joint ring	903	Screwed plug
183	Support foot	412	O-ring	906	Impeller screw
210	Shaft	433	Mechanical seal	914	Hex. socket head cap screw
230	Impeller	502	Casing wear ring	920	Nut
320	Angular contact ball bearing	550	Disc	932	Circlip
322	Cyl. roller bearing	901	Hex. head bolt	940	Key

## General Assembly Drawing with List of Components

### Sewatec - vertical - Underfloor Installation - Bearing brackets S05, S06, S07, S08

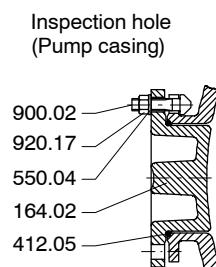

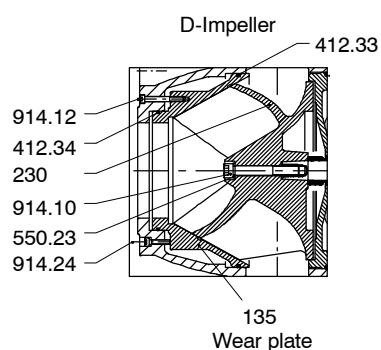

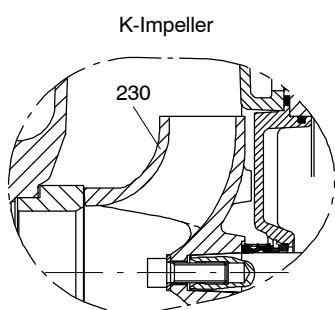

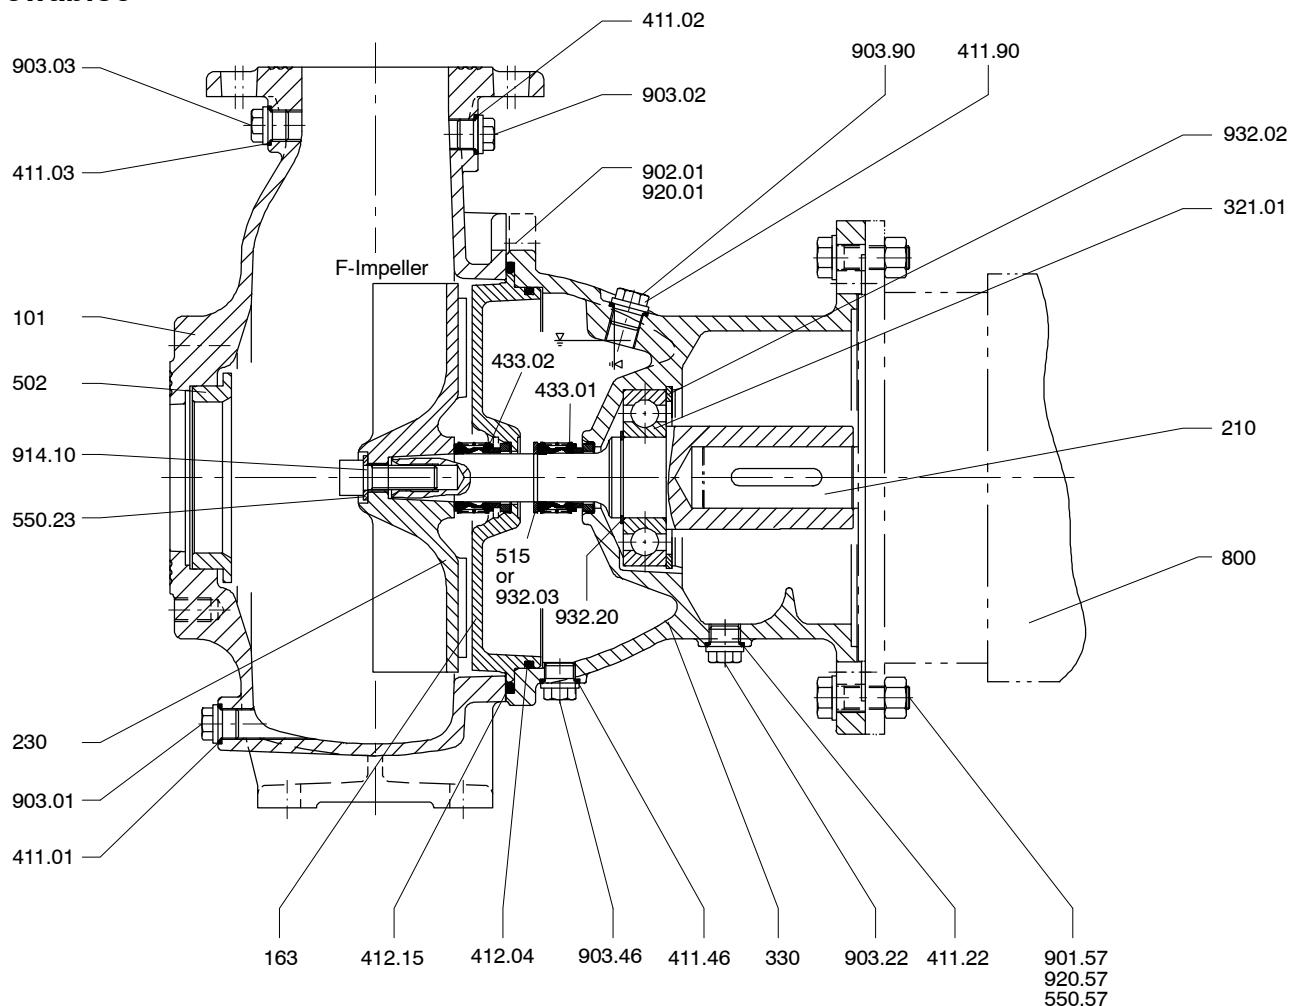

\* Applicable only to Sewatec 100-401, 150-401, K 150-500, 200-330, K 200-500
